Aim:
Program to draw a color cube and spin it using OpenGL transformation matrices.

Algorithm
1. Choose eight 3 dimensional coordinate points such that will make a cube
2. Select the axis to rotate.
3. Rotate the cube by a small angle every small interval of time.
4. Repeat 3rd step as long as axis is not changed.

Code: spinCube.c

Output:
Commands for execution:-

* Open a terminal and Change directory to the file location in both the terminals.
* compile as gcc -lGLU -lGL -lglut spinCube.c -o spincube
* If no errors, run as ./spincube
